WATCh-Ad

(Wheelchair Outcomes Assessment Tool for Adults)

Information for assessors and clinical staff

The aim of this form is to find out the aspects of life most important to the patient who is receiving a wheelchair.

It should be completed at the assessment visit and the results kept with the patient records. It is intended that the patient will be contacted again three to six months after receiving their chair, and asked to complete Part C (a follow-up survey) to see if the patient has experienced any positive changes to their life.

This process should help us improve our services by making sure we focus on users' key needs.

The form should be completed as far as possible by the patient independently, but in some circumstances they may need assistance from their carer, partner or yourself. Carers are also allowed to complete this form on behalf of the patient when the patient is unable to do it themselves. We would suggest that you talk through the items in Part A with the patient, and encourage them to describe what they want to achieve in Part B.

When sending out the Part C follow-up survey to a patient please ensure that the patient's previous 'top 5' from Part A/Part B have been transferred on to Part C.

An example of how the form should be filled out is presented on the next page.

This form is intended for use with adults (aged 18 or older), a separate version for children and young people can be found on the WATCh website: <u>cheme.bangor.ac.uk/WATCh</u>

Area of your life	How your wheelchair could help	Top 5
